WAITS 20 YEARS FOR ONE BLOOM—Twenty years of one's life is a long time to wait for a plant to bloom just once but Mrs. Helma Ekman of 1512 W. 252nd street, Harbor City, was well repaid last week when her cactus finally bloomed. The beautiful pink blossom, which Mrs. Ekman proudly displays, came into full bloom at night and only lasted a few short hours. Planting the cactus over 20 years ago, the plant has now grown until it has reached the roof of her home. This is only one of many plants which thrive in Mrs. Ekman's beautiful flower garden.

Points Given for Prevention of Prickly Heat

Millaria or prickly heat, is an acute, inflammatory disorder of the sweat glands, characterized by the sudden appearance of numerous red spots of pin head size. Tiny blisters may appear. It is, of course, more common in warm, humid weather. For some reason, babies, stout persons or those addicted to alcohol seem to be more susceptible to this skin irritation. The eruption may be of more or less generalized distribution, but usually it is limited to the covered parts of the body. The lesions develop quickly and disappear as a rule in the course of a few days to a week. A hot bath or shower may bring out his warm weather rash. Prickling, burning and itching of a variable degree generally are present during the attack. Preventive measures consist in guarding against exposure to excessive heat, wearing light clothing and abstaining from the use of alcohol. In case prickly heat rash develops, the affected skin areas should be kept as cool as possible. Use of mild, astringent lotions is beneficial. A liberal application of bland dusting powder such as zinc stearate or boric acid is also helpful.
